Last Mile: VSAT

Utilising key partnerships, ARC Telecoms offers the latest in satellite technology to provide world class connectivity and managed business solutions from any location. VSAT is a satellite, point-to-multipoint access service that is optimised for the business market and allows them to connect across multiple business sites and in areas where other connectivity solutions are simply not available. The VSAT solution is perfectly suited for South African companies with remote branches or who require a solution into Africa that can offer reliable data and internet connectivity without incurring major infrastructure costs.

Typology Diagram

Features

- Various speeds and package options
- Connect multiple business sites in a secure and managed network
- Next generation network infrastructure that is completely IP based
- Coverage into Africa using C-Band or Ku-Band

Benefits

- Access and connect remote locations where no other connectivity is available
- Consistency of speed and service
- Quick deployment
- Use a single provider to connect to local, African and international branches
- Single platform that can deliver separated intranet, internet and extranet traffic over VPNs without compromising on security
- Cost savings and added value through service enhancements
- Redundancy to fixed line infrastructure
- Accommodates for temporary connectivity requirements
