Broadband Data Services

ARC Telecoms’ broadband data services offer a high-speed, low contention data solution suitable for business applications and requirements. Broadband data services are an ideal option for businesses requiring a more stable and predictable internet service when compared to standard consumer offerings but at a more affordable price than similar premium business internet services.

ARC’s broadband data services is a capped service which can be bundled with a range of ARC’s last mile access mediums and value added applications. The service offers a flat in-bundle rate per Gigabyte regardless of the data package. The benefit of which is that this allows for the flexibility of a single bucket of data across different business sites and multiple access mediums.

Typology Diagram
